

Enterprise Service Intake

User Manual - V2

Candidate	Forrest Zhang
Prepared For	Mitacs hiring and technical review team
Audience	Reviewers, portal customers, coordinators, managers, and administrators
Environment	https://mitacs.crm.dynamics.com/
Portal	https://enterprise-service-intake-hellox.powerappsportals.com
Status	Candidate user manual - V2

This guide explains the live review path: customer portal submission, required-file handling, internal coordinator review, routing matrix administration, approval/ERP sync, and troubleshooting evidence.

Quick Access

Area	URL / Location	Purpose
Power Pages site	https://enterprise-service-intake-hellox.powerappsportals.com	External customer intake, drafts, required-file upload, and final submission
Model-driven app	https://mitacs.crm.dynamics.com/main.aspx?appid=3de4f813-b454-f111-bec7-000d3a3aca8f	Internal coordinator, manager, configuration, and monitoring experience
Maker solution	https://make.powerapps.com/environments/99dd50ed-a753-e37f-912c-78a022b12b09/solutions	Solution components, flows, tables, forms, views, and web resources
Hidden ERP console	https://hellox.ca/esi/	View mock ERP sync attempts, returned external IDs, and failure-path evidence

- Reviewer passwords are not stored in Git.
- The administrator should share passwords out of band and rotate them after the interview.

External Customer Portal

Create Or Resume A Request

- 1 Open the Power Pages site and sign in.
 - 2 Select New service request.
 - 3 Use My requests to resume a draft or review submitted requests.
 - 4 Use View details on a request card to inspect portal-safe request details.
 - 5 Use Save for later if you want to leave before final submission.
- Draft requests remain in Draft and do not trigger the applicant confirmation email.
 - Sign-in is required before creating, saving, resuming, or submitting a request so each request and file upload stays linked to the correct portal account.
 - Portal users do not see internal-only notes, error logs, approval details, or integration payloads.

Request Details, Impact, And Files

- 1 Enter request title, category, and description.
- 2 Select Impact level and Urgency.
- 3 Watch the response estimate update without a full page reload.
- 4 Upload at least one file when documentation is required.
- 5 Submit from Review and capture the confirmation number.

Scenario	Expected Result
Files required	Review remains disabled until at least one file exists.
Files optional	The request can be submitted without an upload; optional files can be added after submission.

Internal Coordinator App

Navigation Group	Use
Intake Work	Service Requests and Service Request Evidence Reviews
Routing Configuration	Routing Matrix, Departments, SLA Policies, and Service Categories
Monitoring	System Error Logs and External Sync Logs

Role-Based Dashboards

User	Required Roles	Expected Dashboards
agent@hellosmart.ca	Basic User; ESI Service Coordinator	Operations Dashboard and Monitoring Dashboard
manager@hellosmart.ca	Basic User; ESI Approval Manager; Approvals User	Approval Dashboard and Monitoring Dashboard
forrest@hellosmart.ca	System Administrator or System Customizer	All dashboards for administration and review

- Approvals User supports Power Automate approval records; it does not control ESI dashboard visibility.
 - If a recently changed dashboard list looks stale, sign out and back in or open a fresh browser session.
- 1 Open Intake Work > Service Requests.
 - 2 Use Active Service Requests to scan operational columns.
 - 3 Open a request and review customer, triage, routing/SLA, approval/ERP sync, and resolution fields.
 - 4 Open Documents to view SharePoint files and SR Evidence Reviews.
- Critical closure is blocked until internal resolution notes and accepted evidence with a SharePoint file URL exist.

Routing Matrix Administration

- 1 Open Routing Configuration > Routing Matrix.
 - 2 Select a service category tab.
 - 3 Review summary cards for department, SLA distribution, manager review, and required documents.
 - 4 Edit Department or SLA from dropdowns.
 - 5 Use toggles for Review and Docs.
 - 6 Wait for the saved status.
- The page updates the same Dataverse rules used by the portal preview and routing plugin.
 - Routing Matrix presents the 80 active exact-match cells.
 - The raw Dataverse table also includes one active generic fallback, so the clean final rule set is 81 active rules total.
 - Runtime logic filters active rules and uses the fallback only when no exact active match exists.
 - Select a rule name to open the underlying Dataverse record.
 - If you change a rule during the live demo, change it back immediately.

Approval, ERP Sync, And Monitoring

- 1 Open an approval-required request.
- 2 Open Power Automate flow ESI - Approval and ERP Sync.
- 3 Review the Try scope, approval action, OAuth token request, protected HTTP POST, Service Request update, External Sync Log, and Catch scope.
- 4 Use Approval records and flow run history as evidence if email delivery is restricted.

Surface	Use
System Error Logs	Plugin, portal, flow, approval, and integration failures.
External Sync Logs	ERP endpoint calls, HTTP status, external ID, payload snapshot, and timestamps.
HelloX ERP Dashboard	Open https://hellox.ca/esi/ to view received mock ERP requests, returned external IDs, accepted/failed counts, and breakdowns by status, priority, and department.
Flow Run Histories	Confirmation email, approval, ERP sync, and Catch-path evidence.

Demo Accounts And Notes

Account	Purpose	Sign-In Location	Credential Note
agent@hellosmart.ca	Internal service coordinator	Model-driven app / Power Platform environment	Uses the temporary demo password shared separately by the administrator
manager@hellosmart.ca	Approval manager	Model-driven app / Power Platform environment	Uses the temporary demo password shared separately by the administrator
forrest@hellosmart.ca	Admin/customizer reviewer	Maker portal, model-driven app, and Power Pages administration	Admin password is shared separately by the administrator

- Do not commit passwords or OAuth secrets.
- Power Platform environment: <https://mitacs.crm.dynamics.com/>

- Maker solution: <https://make.powerapps.com/environments/99dd50ed-a753-e37f-912c-78a022b12b09/solutions>
- Model-driven app: <https://mitacs.crm.dynamics.com/main.aspx?appid=3de4f813-b454-f111-bec7-000d3a3aca8f>
- Power Pages site: <https://enterprise-service-intake-hellox.powerappsportals.com>
- Hidden ERP console: <https://hellox.ca/es/>
- The portal is private for the interview tenant.
- Normal rule maintenance should use Routing Matrix.
- The clean final routing table should contain 81 active rules: 80 exact matrix rows plus one active fallback.
- No final solution export should be produced until the administrator requests it.
